PALATINUS

concept plan

Gódor Bálint visual artist

Hadnagy Timi designer

We designed a studio for middle-aged ladies in the Palatinus house. In order to further sell the empty apartment to be renovated, the customer requested the sophisticated but not customized design and its visual plans.

The interior designers were involved early in the design of the three-story family house, so we had the opportunity to create the most livable spaces for the family. Their future home is prepared keeping in mind their way of life and taste.

During the project, I participated in the interior design and specialized plans.

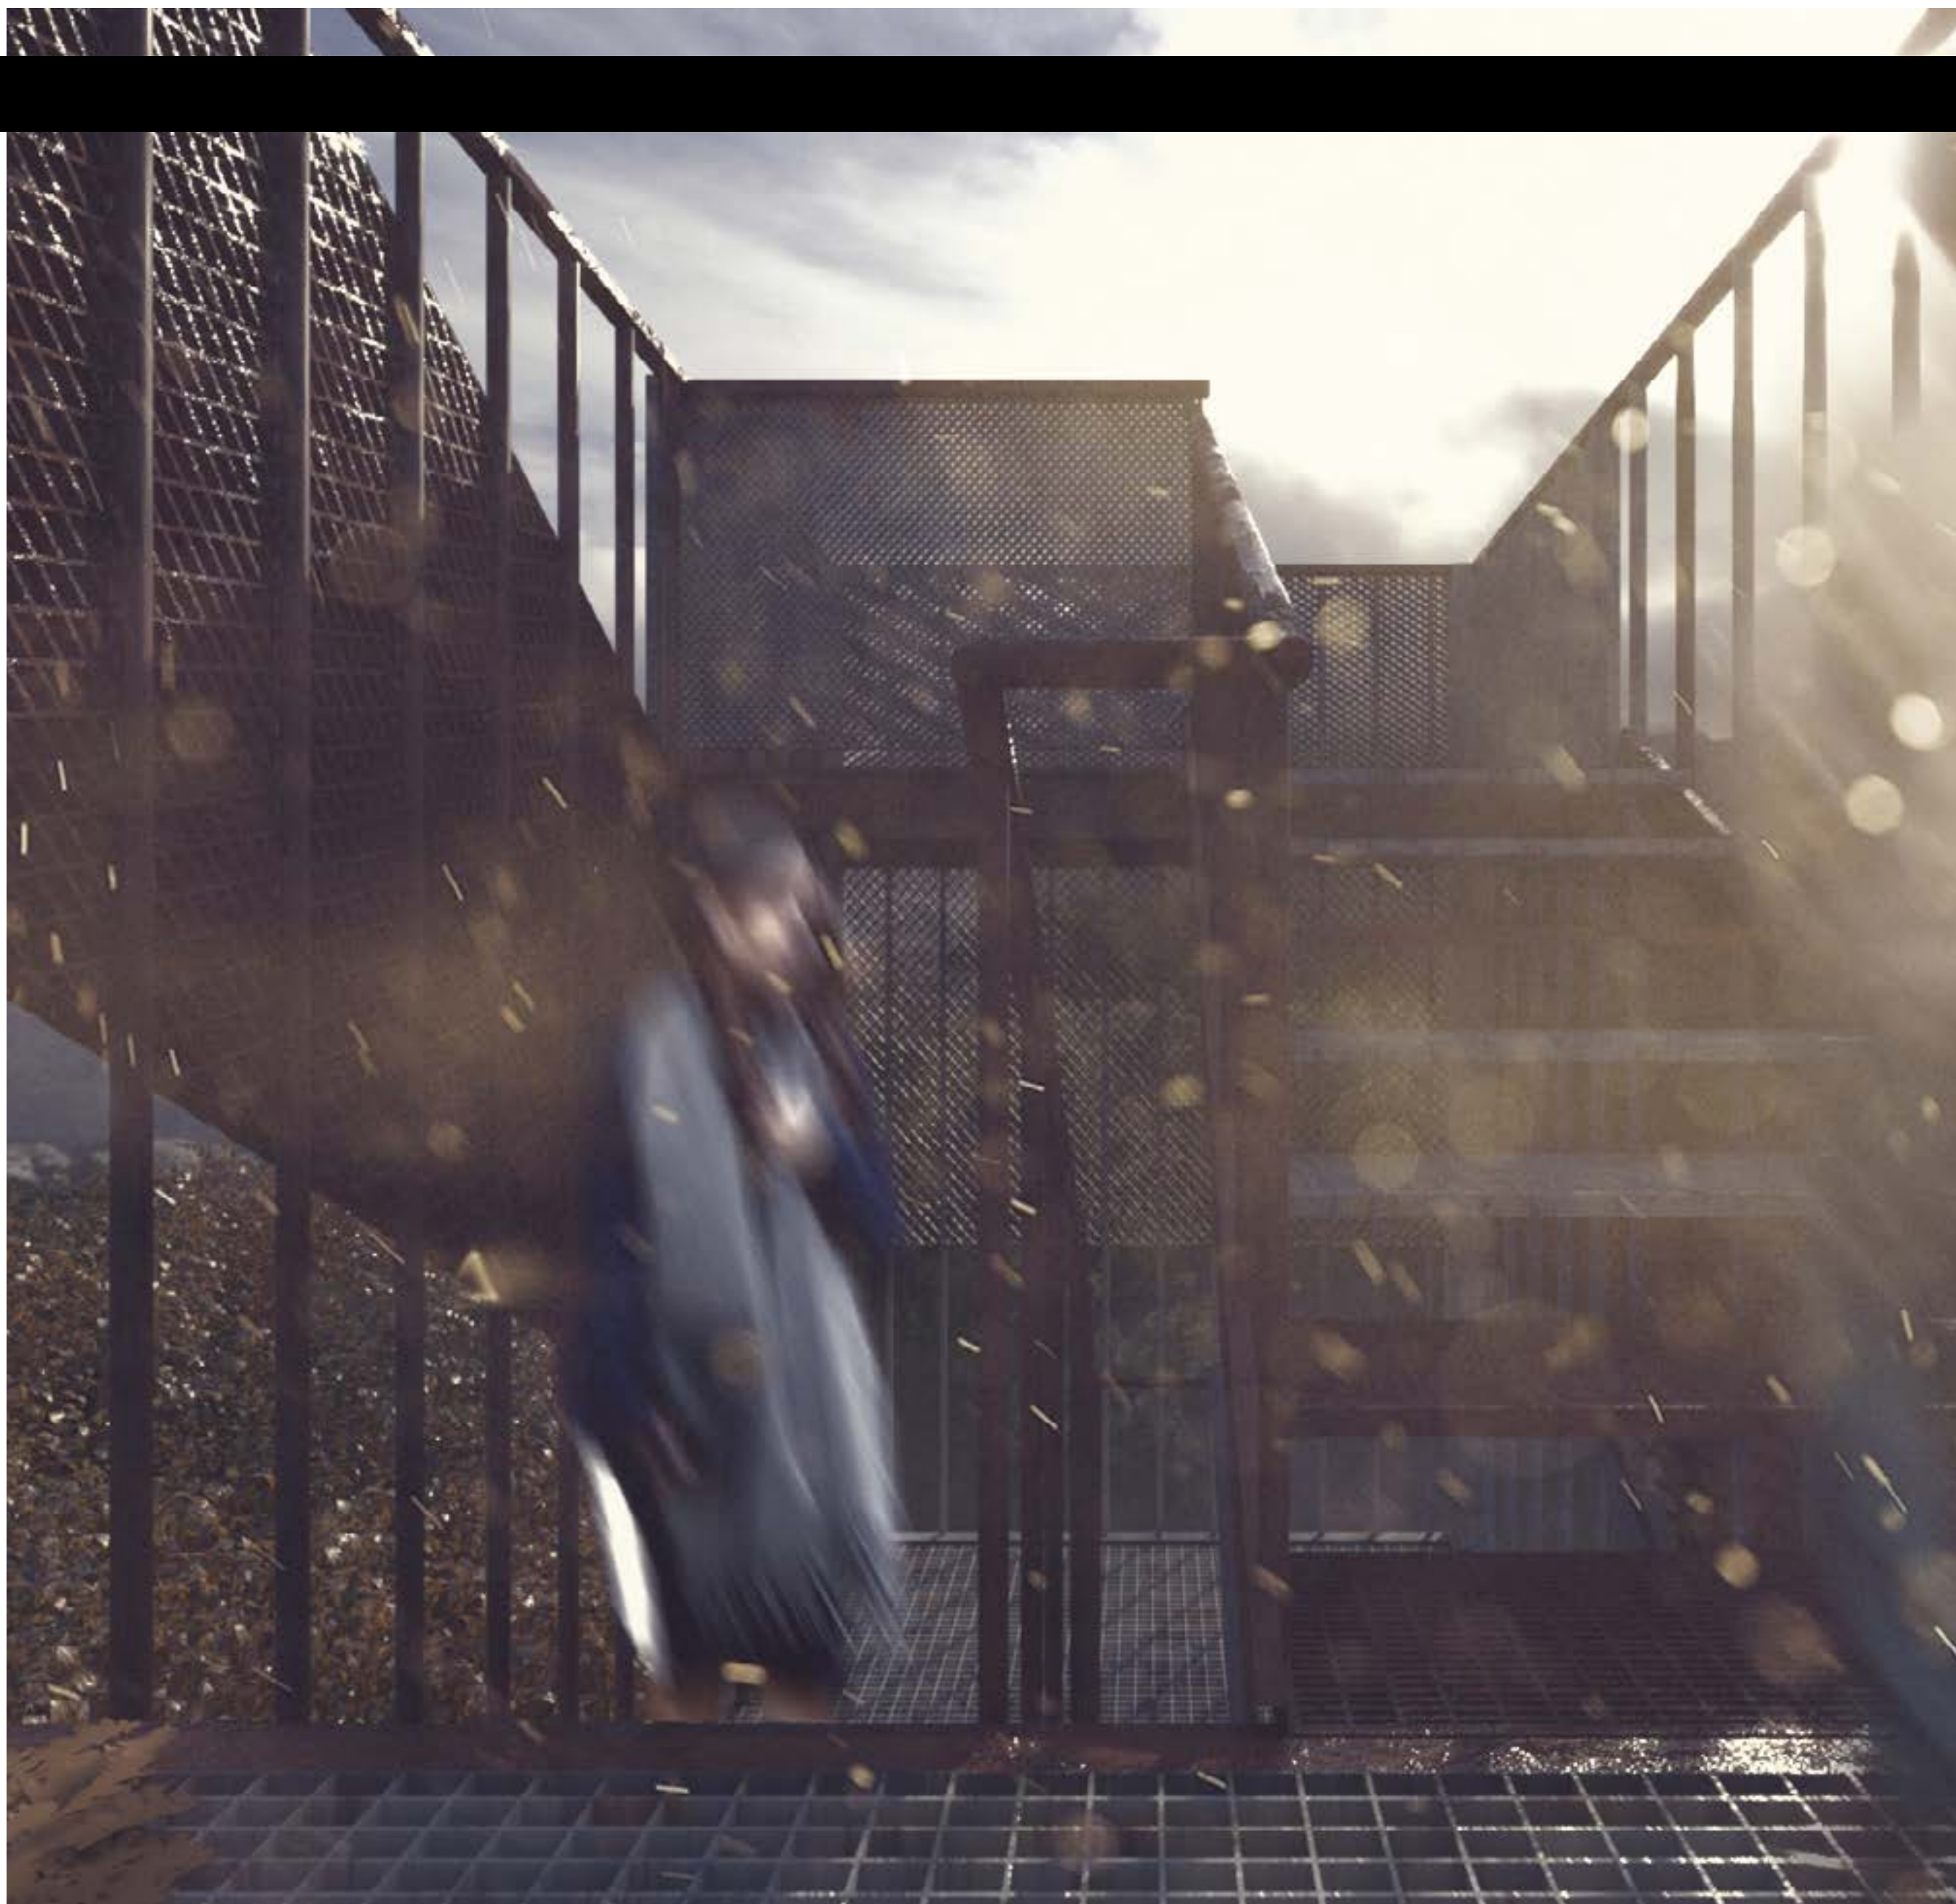

SZÉCHNYI-HEGY

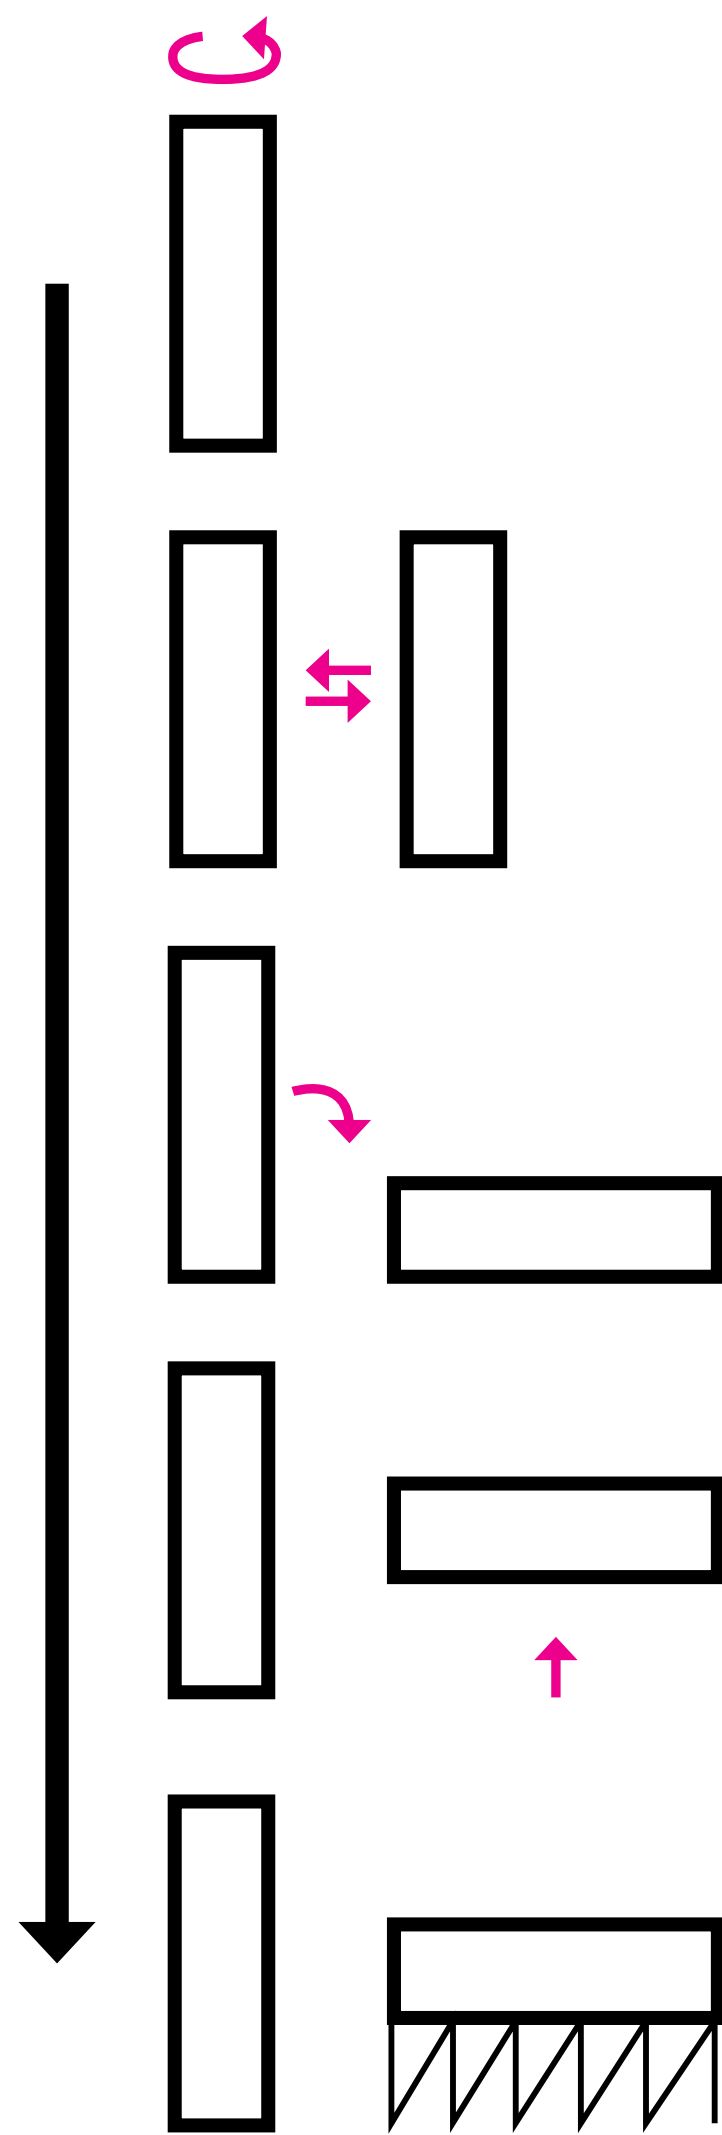

*revitalization, tower design
teamwork with Adham Shakaki és Fekete Áron
Árkay-price 2. place*

During an intensive planning task, after getting to know the area and assessing needs, we revitalized the undeservedly underutilized area of Széchenyi Hill. The area has a number of paths and cleared routes that cross each other and a circle is created by the visitors throughout the area. We built our concept on this: by placing objects at the intersections of the routes, we help the visitors' journey for even more complete relaxation.

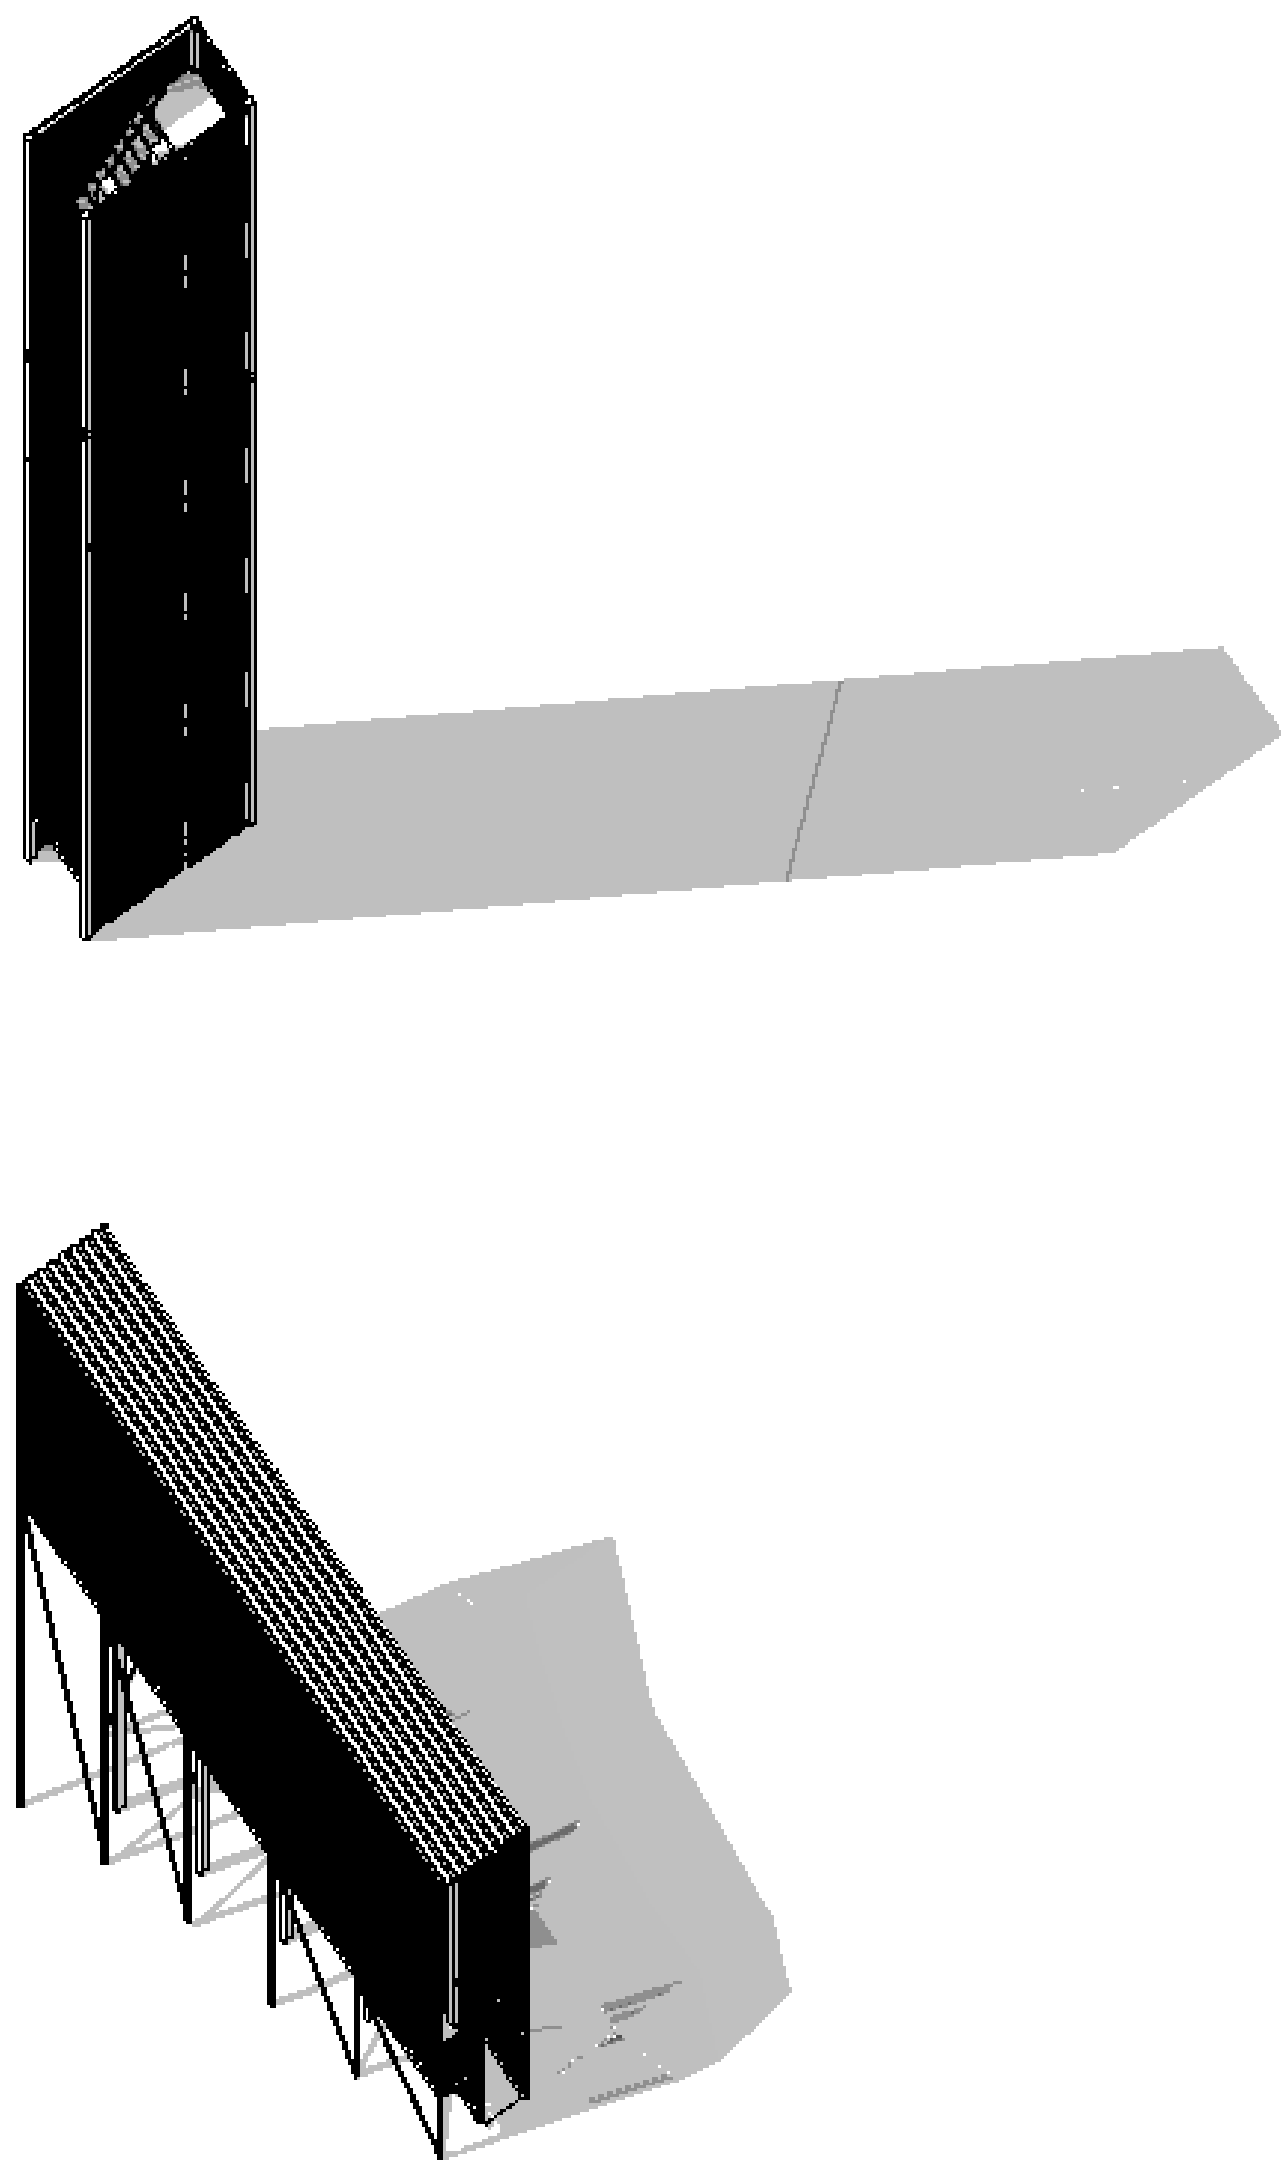

The topography of the area justified the location of two lookout points. The lookout towers have the same structure, but their geographical location is different, so one tower represents the role of a classic lookout point, while the other is a tilting observation unit. By the plan we mean 2nd place in the Árkay competition.

CONCEPT

AXONOMETRY

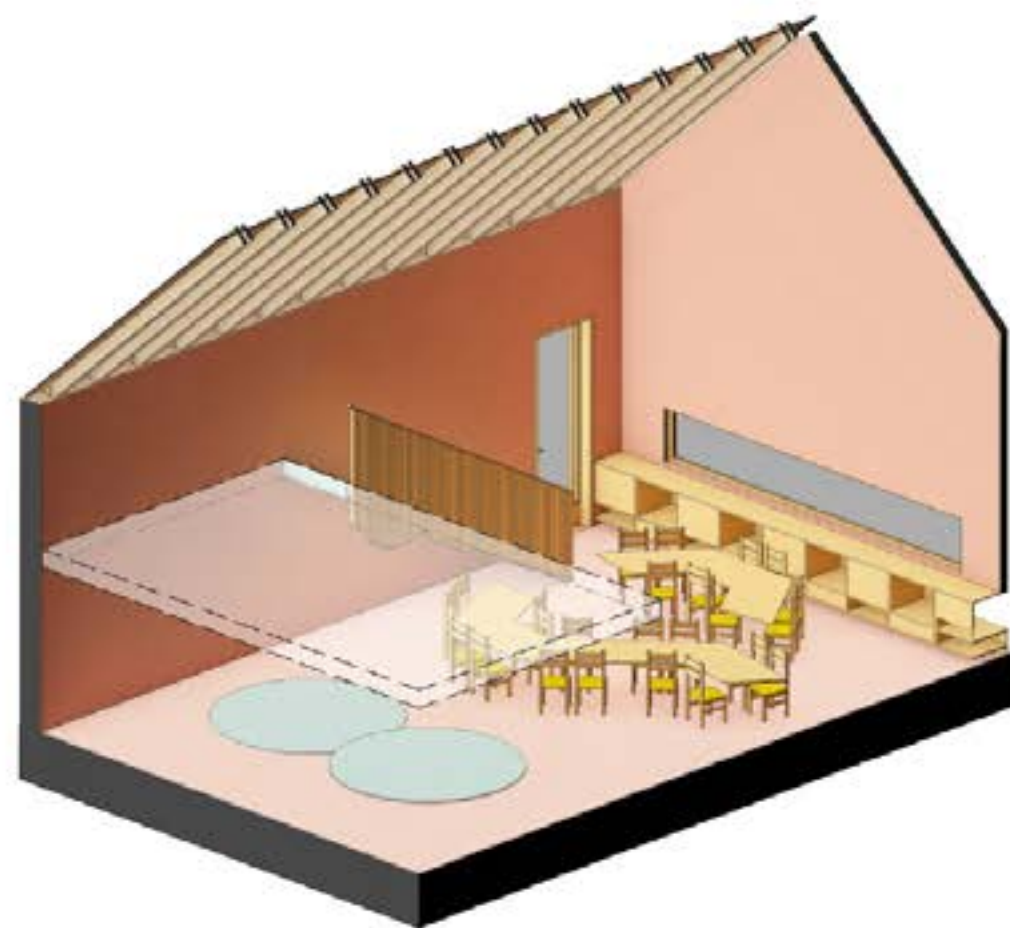

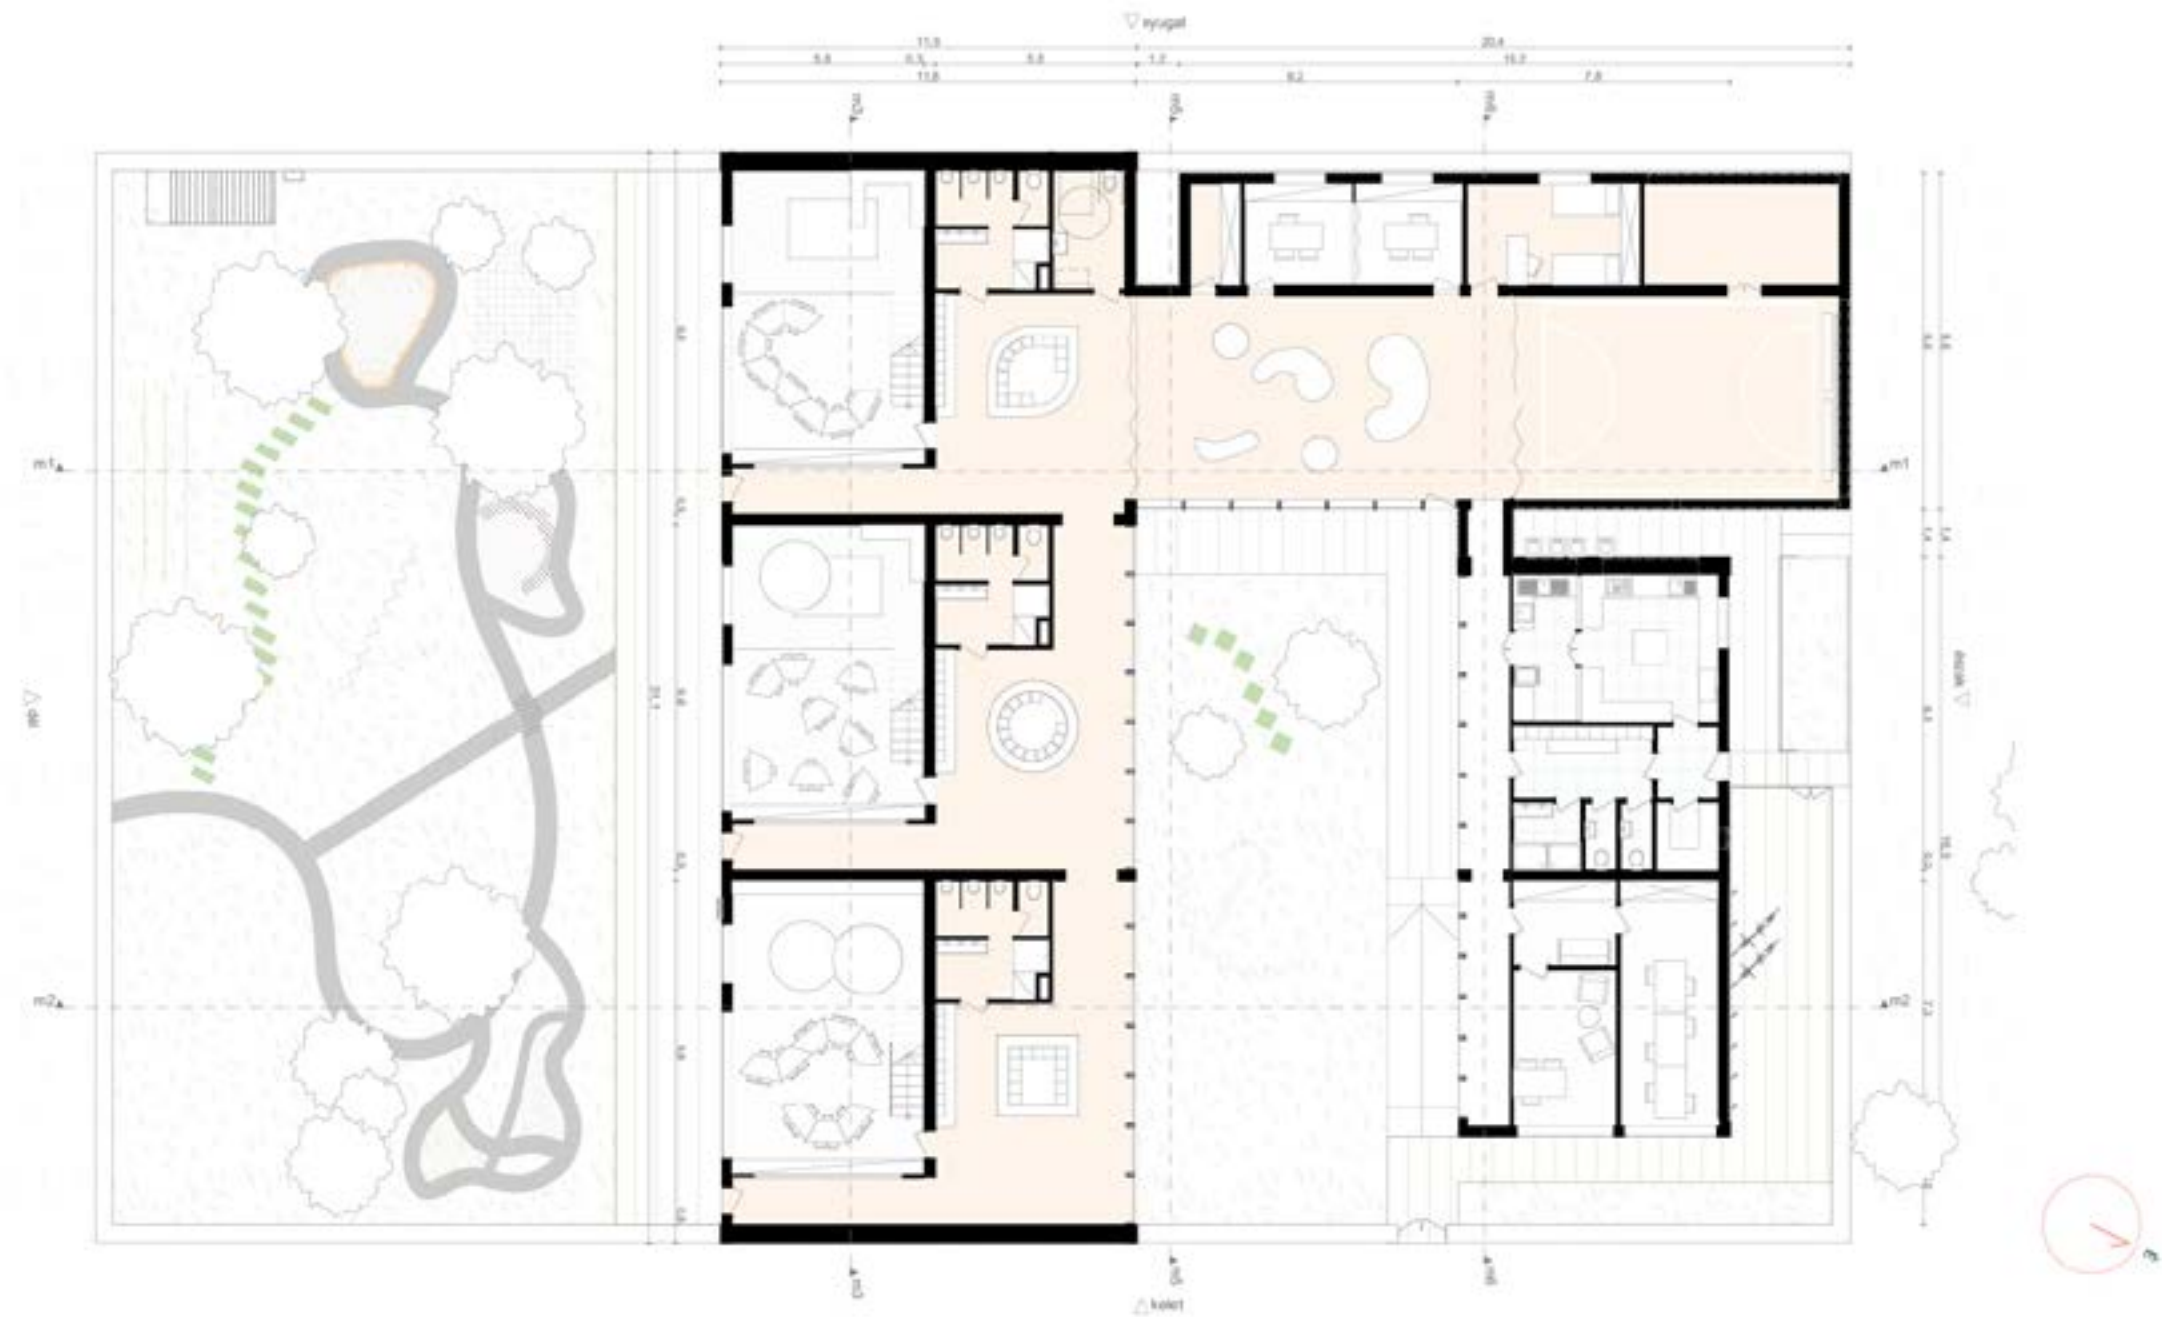

In the Balaton highlands, the Nivegy valley is home to the Schoenstatt community and the Congregation of Nazarenes who believe in Jesus Christ. The settlement of Szentantalfa plays a decisive role in the life of the valley, which consists of five settlements with a population of 1,049. The continuous growth of the population is largely the merit of communities professing Christian values, where it is not uncommon for one family to have 8-10 children. In Szentantalfán, the kindergarten with a capacity of 55 children is not enough to meet the needs, so instead of the kindergarten currently operating with two groups, it is justified to design an institution capable of educating three groups, i.e. the goal is to accommodate 75 children.

The installation of the kindergarten in the green zone, further from the main road, will benefit the children, so according to my concept, the new building is located a few meters from the old one on a larger plot. The 41-meter-wide and 115-meter-long lot is located on the border of the urban and village residential areas. The southern part of the landscaped lot is sloping, there is a playground, the northern part is flat, landscaped and currently only used by the kindergarten instead of their own yard.

The functions of the three buildings were adapted to the use of space by children, educators and parents. I design the buildings with gabled roofs (the wing of the group rooms and the kitchen-office unit) with the same construction method: the supporting structure of the transverse wall is complemented by lightweight walls, thus enabling the large size of the glass surfaces in the inner courtyard. The group rooms with a dressing room and water block are located between two transverse walls, where the carpentry structure results in an open ceiling space with a covered chair for the gallery layout of the group rooms. The mixed-use flat-roofed lightweight building connects the gable-roofed buildings, where arrivals are awaited and the development spaces are located.

ALAPRAJZ

NAGYMAROS

family house

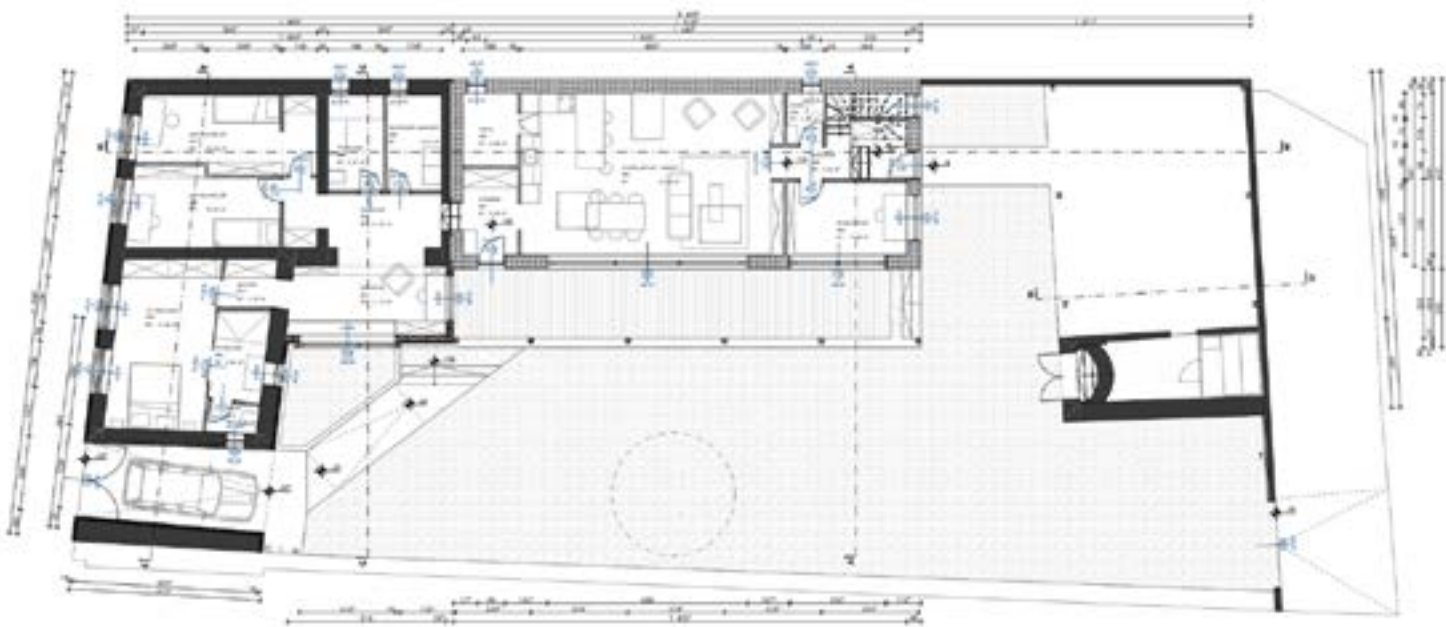

Madzin Attila architect

teamwork with Fekete Áron

The construction of the plot located between Király and Hold utca in the historic downtown area of Nagymaros is planned for a family of four from Budapest. An existing adobe house on the plot and its mixed masonry extension today have a U-shaped installation. The new building will be built of hemp concrete in compliance with the requirements, but with a modern tract that meets today's needs. Sustainability, economical construction and operation are important aspects both for the customer and for us, the designers.

BÁZIS OFFICE

office
teamwork with Fekete Áron

The outdated image of the office was redesigned to meet to-day's needs. The replacement of the coverings and the characteristic reception area serve the comfort and visual nourishment of the visitors.

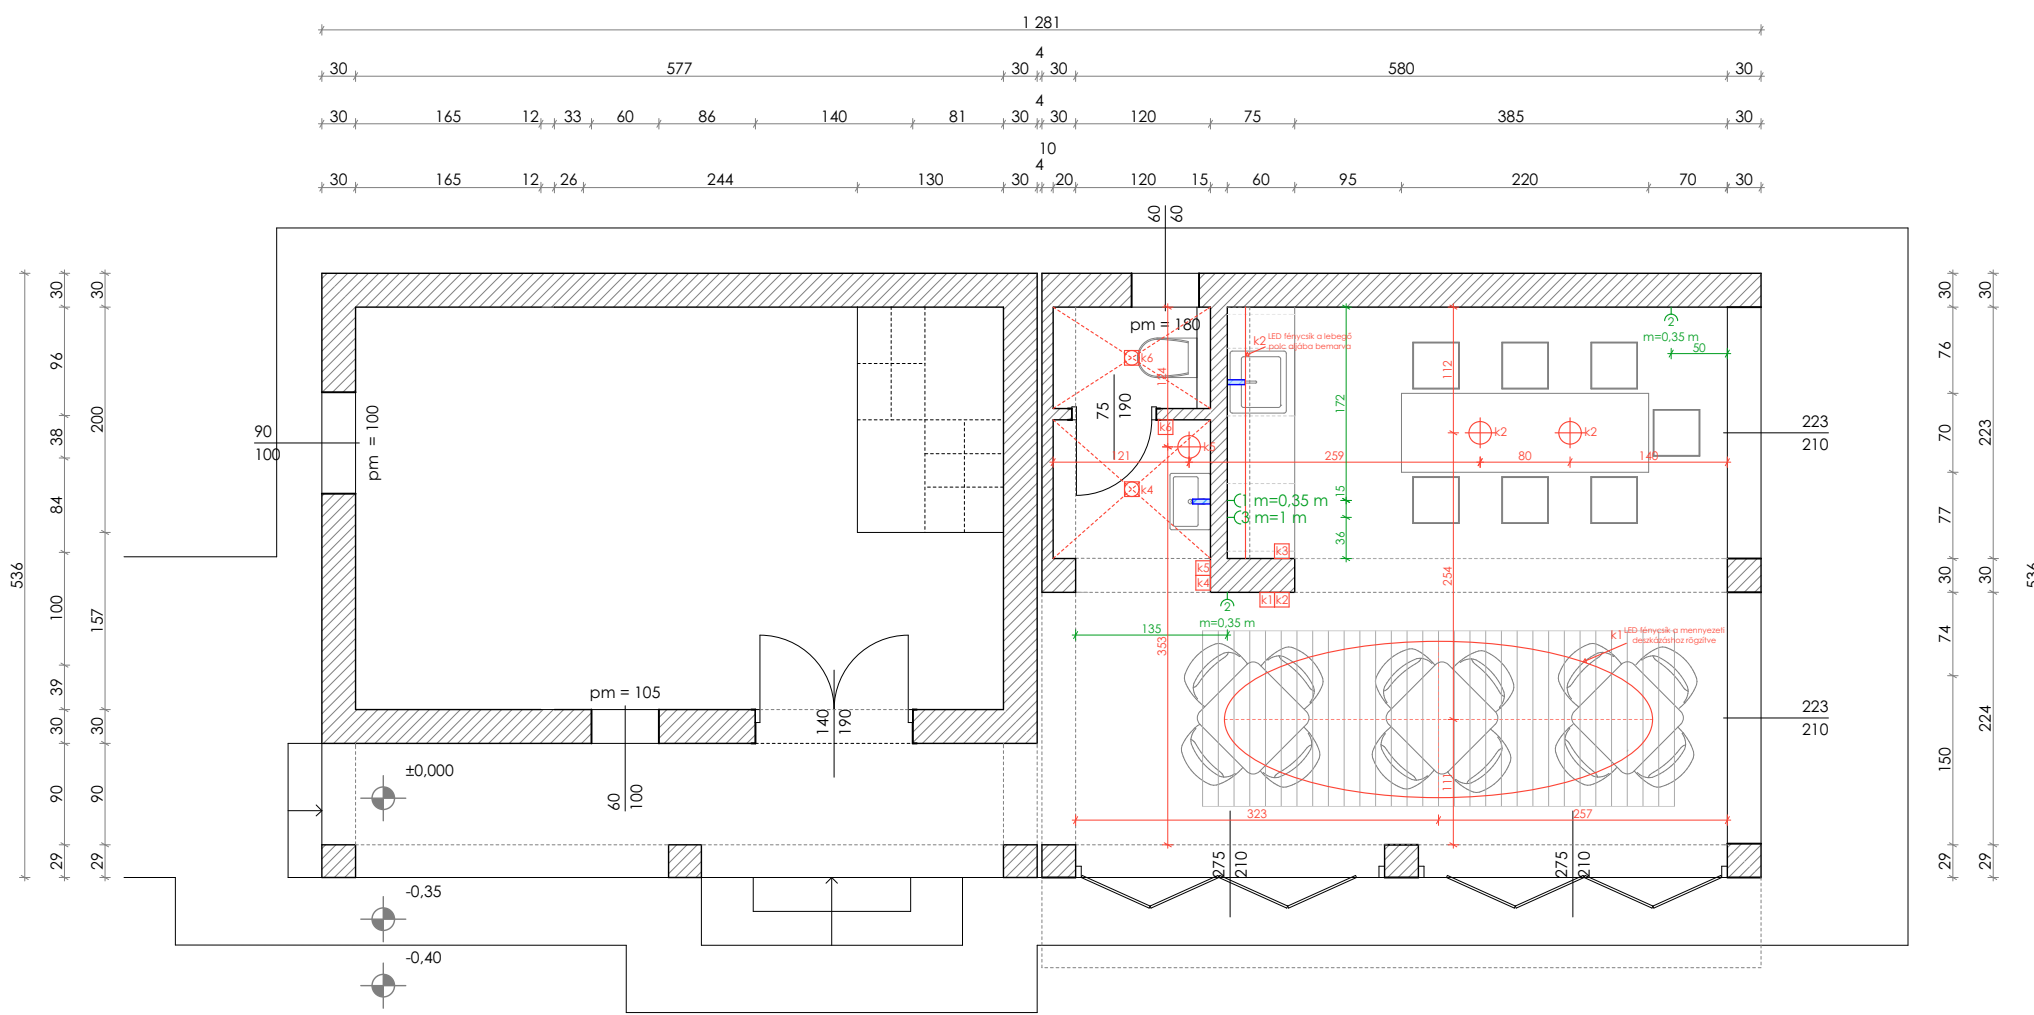

interior design

Czibula Zoltán architect

Hadnagy Timi designer

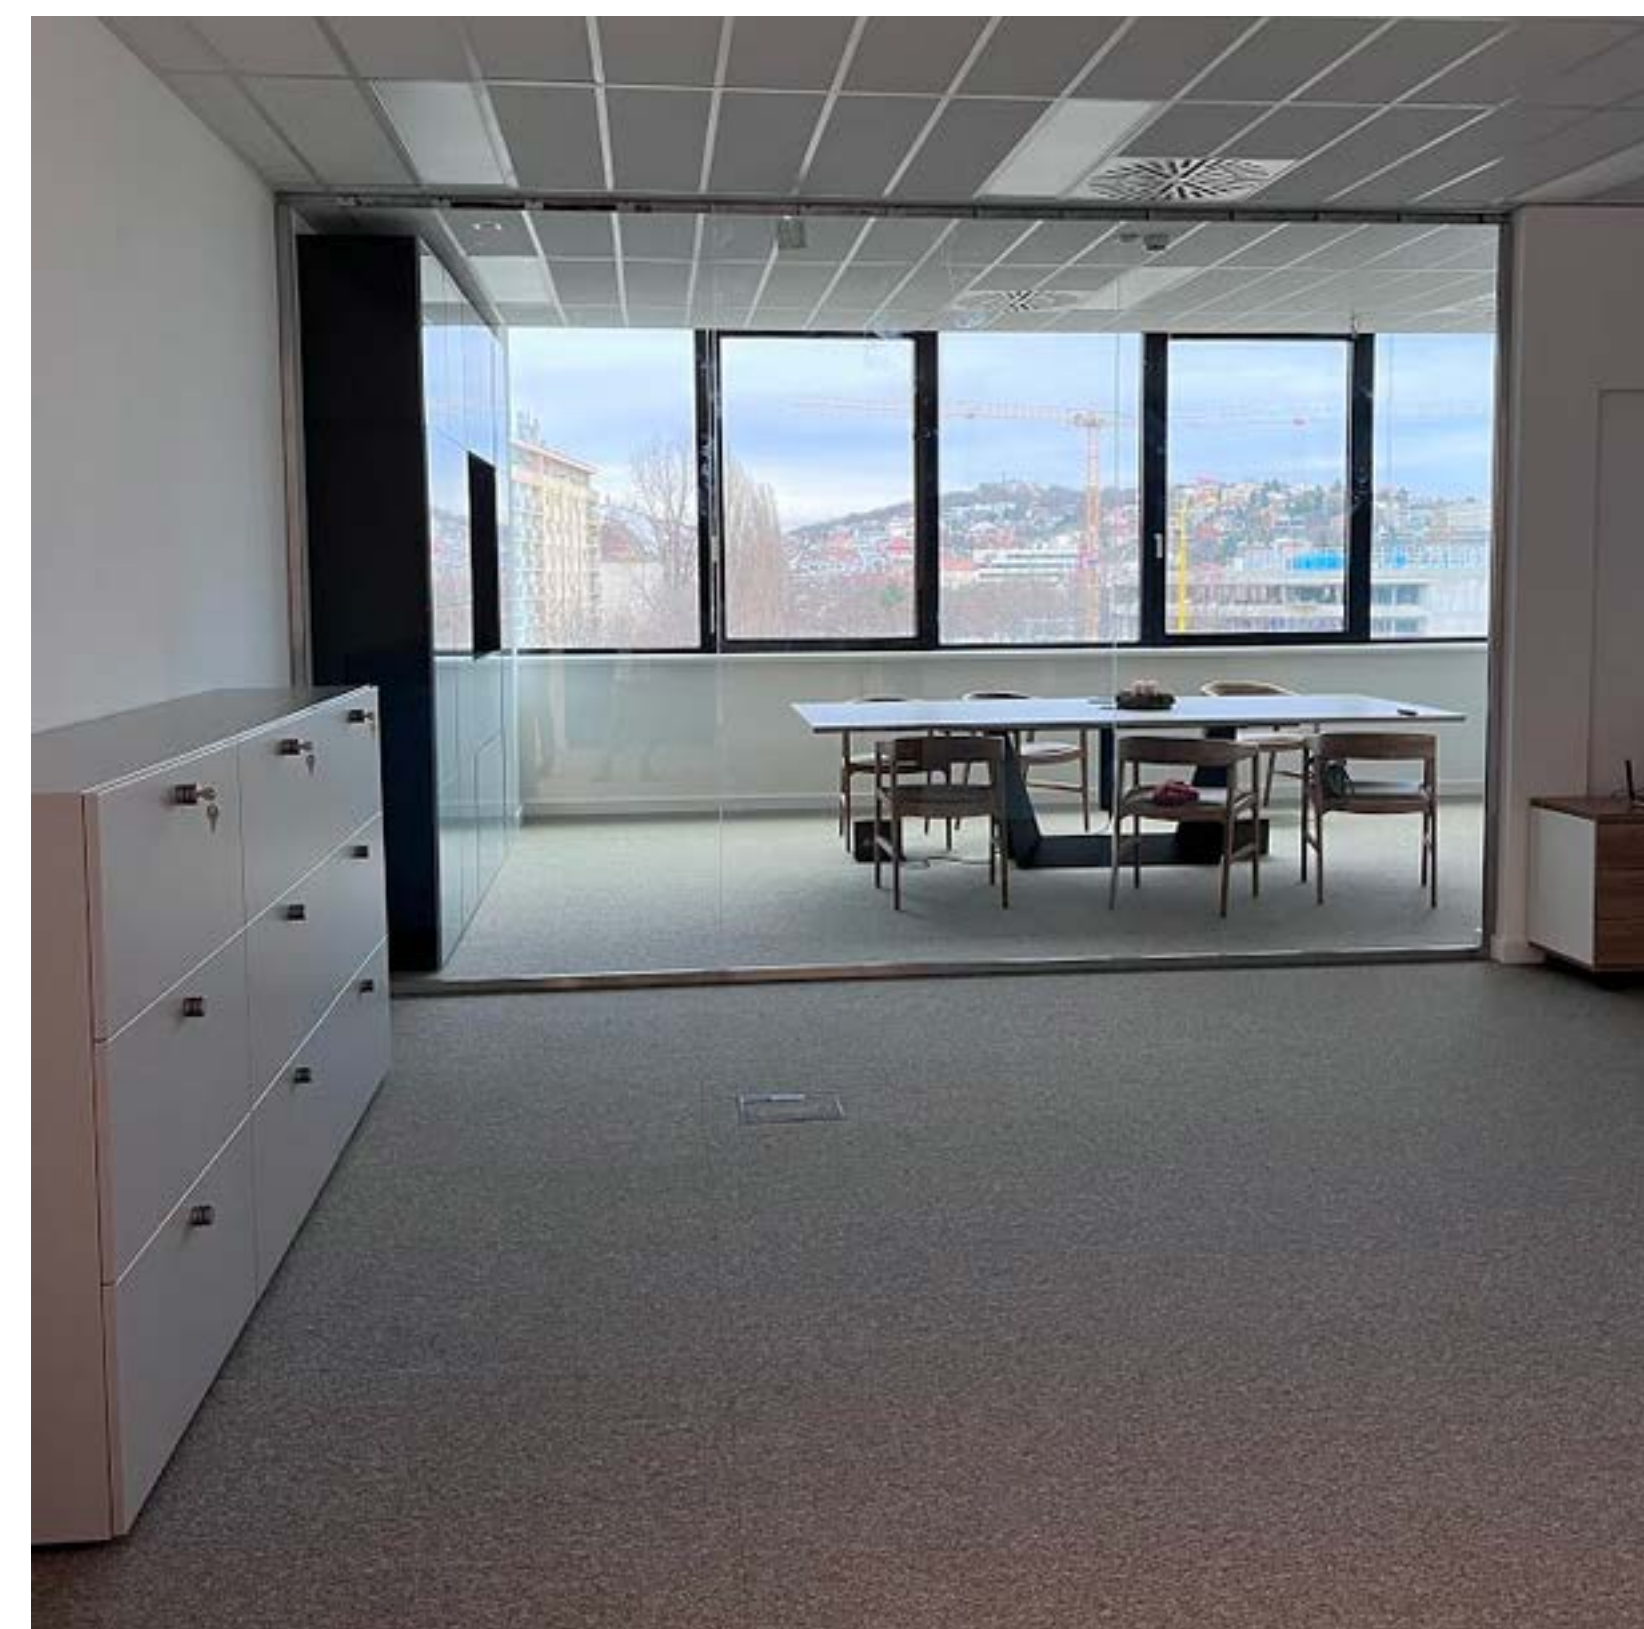

The area on the outskirts of Albertirsa was settled many years ago with press houses, which have now been converted and rebuilt one by one into residential houses. Along the road, a small house with a vineyard remains, where currently a Préház /extension of the small house/ and later a Préshotel /guesthouse/ are being built for the owner and his circle of friends.

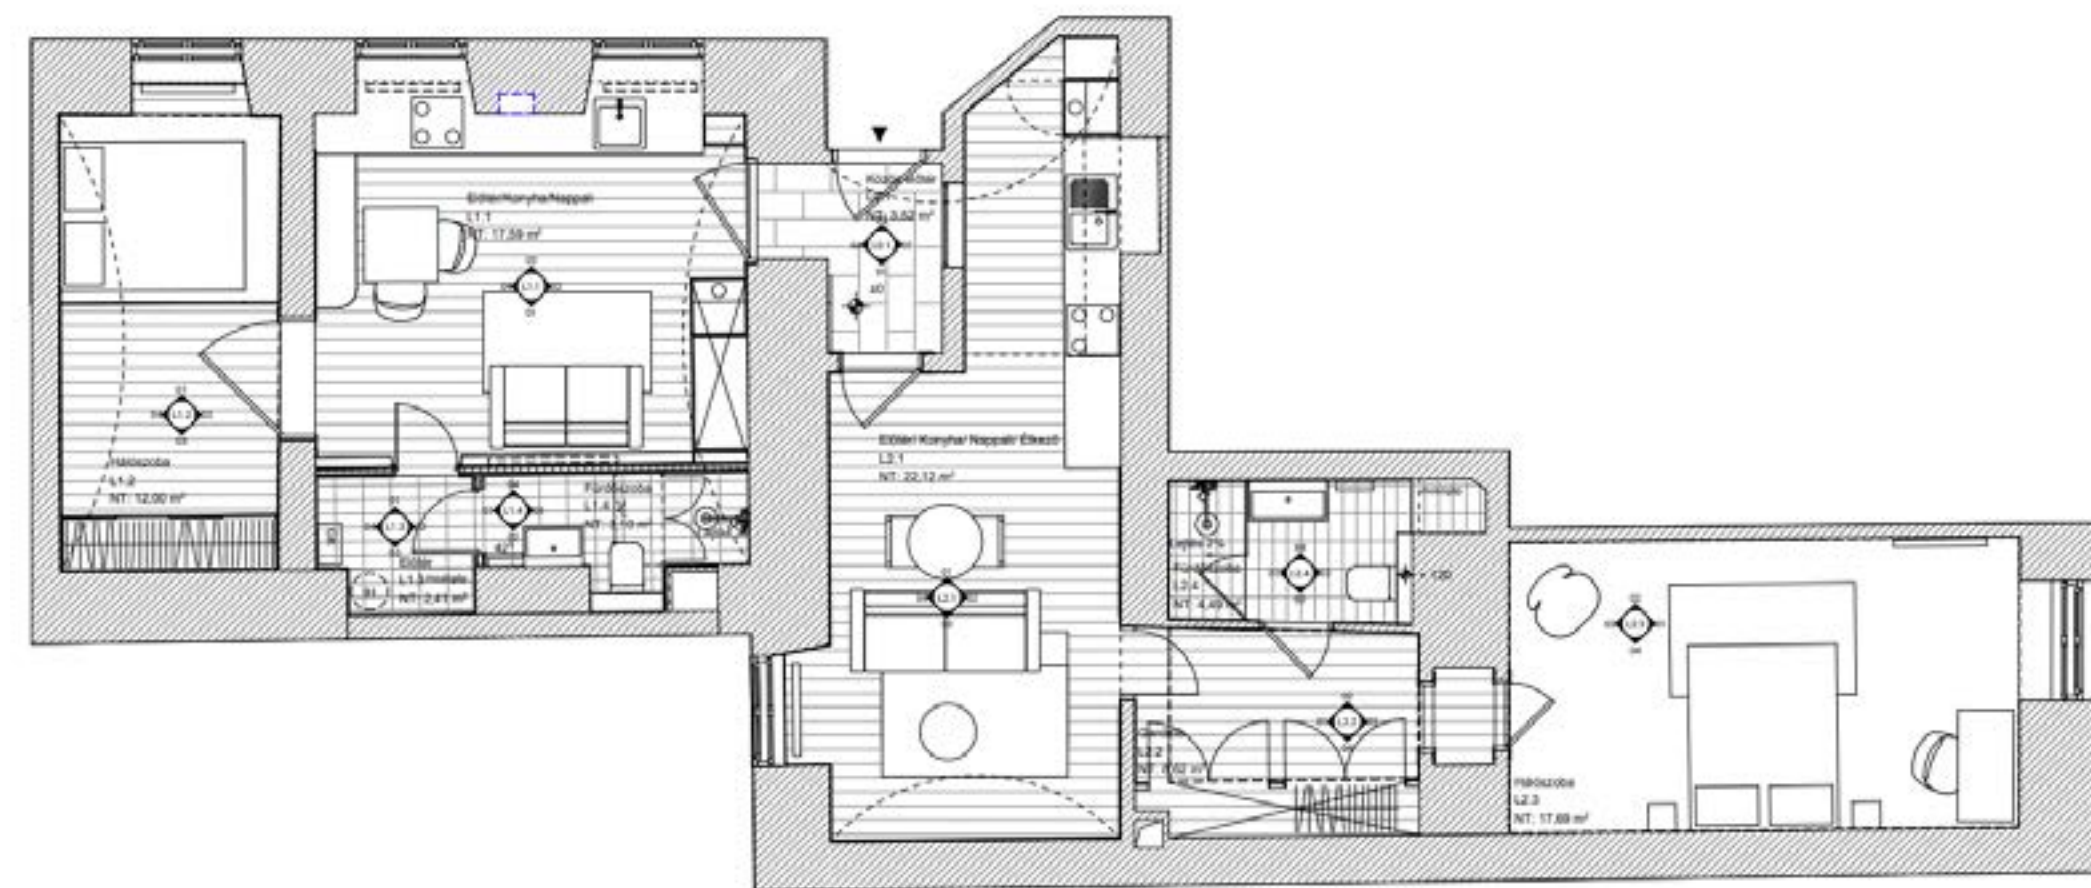

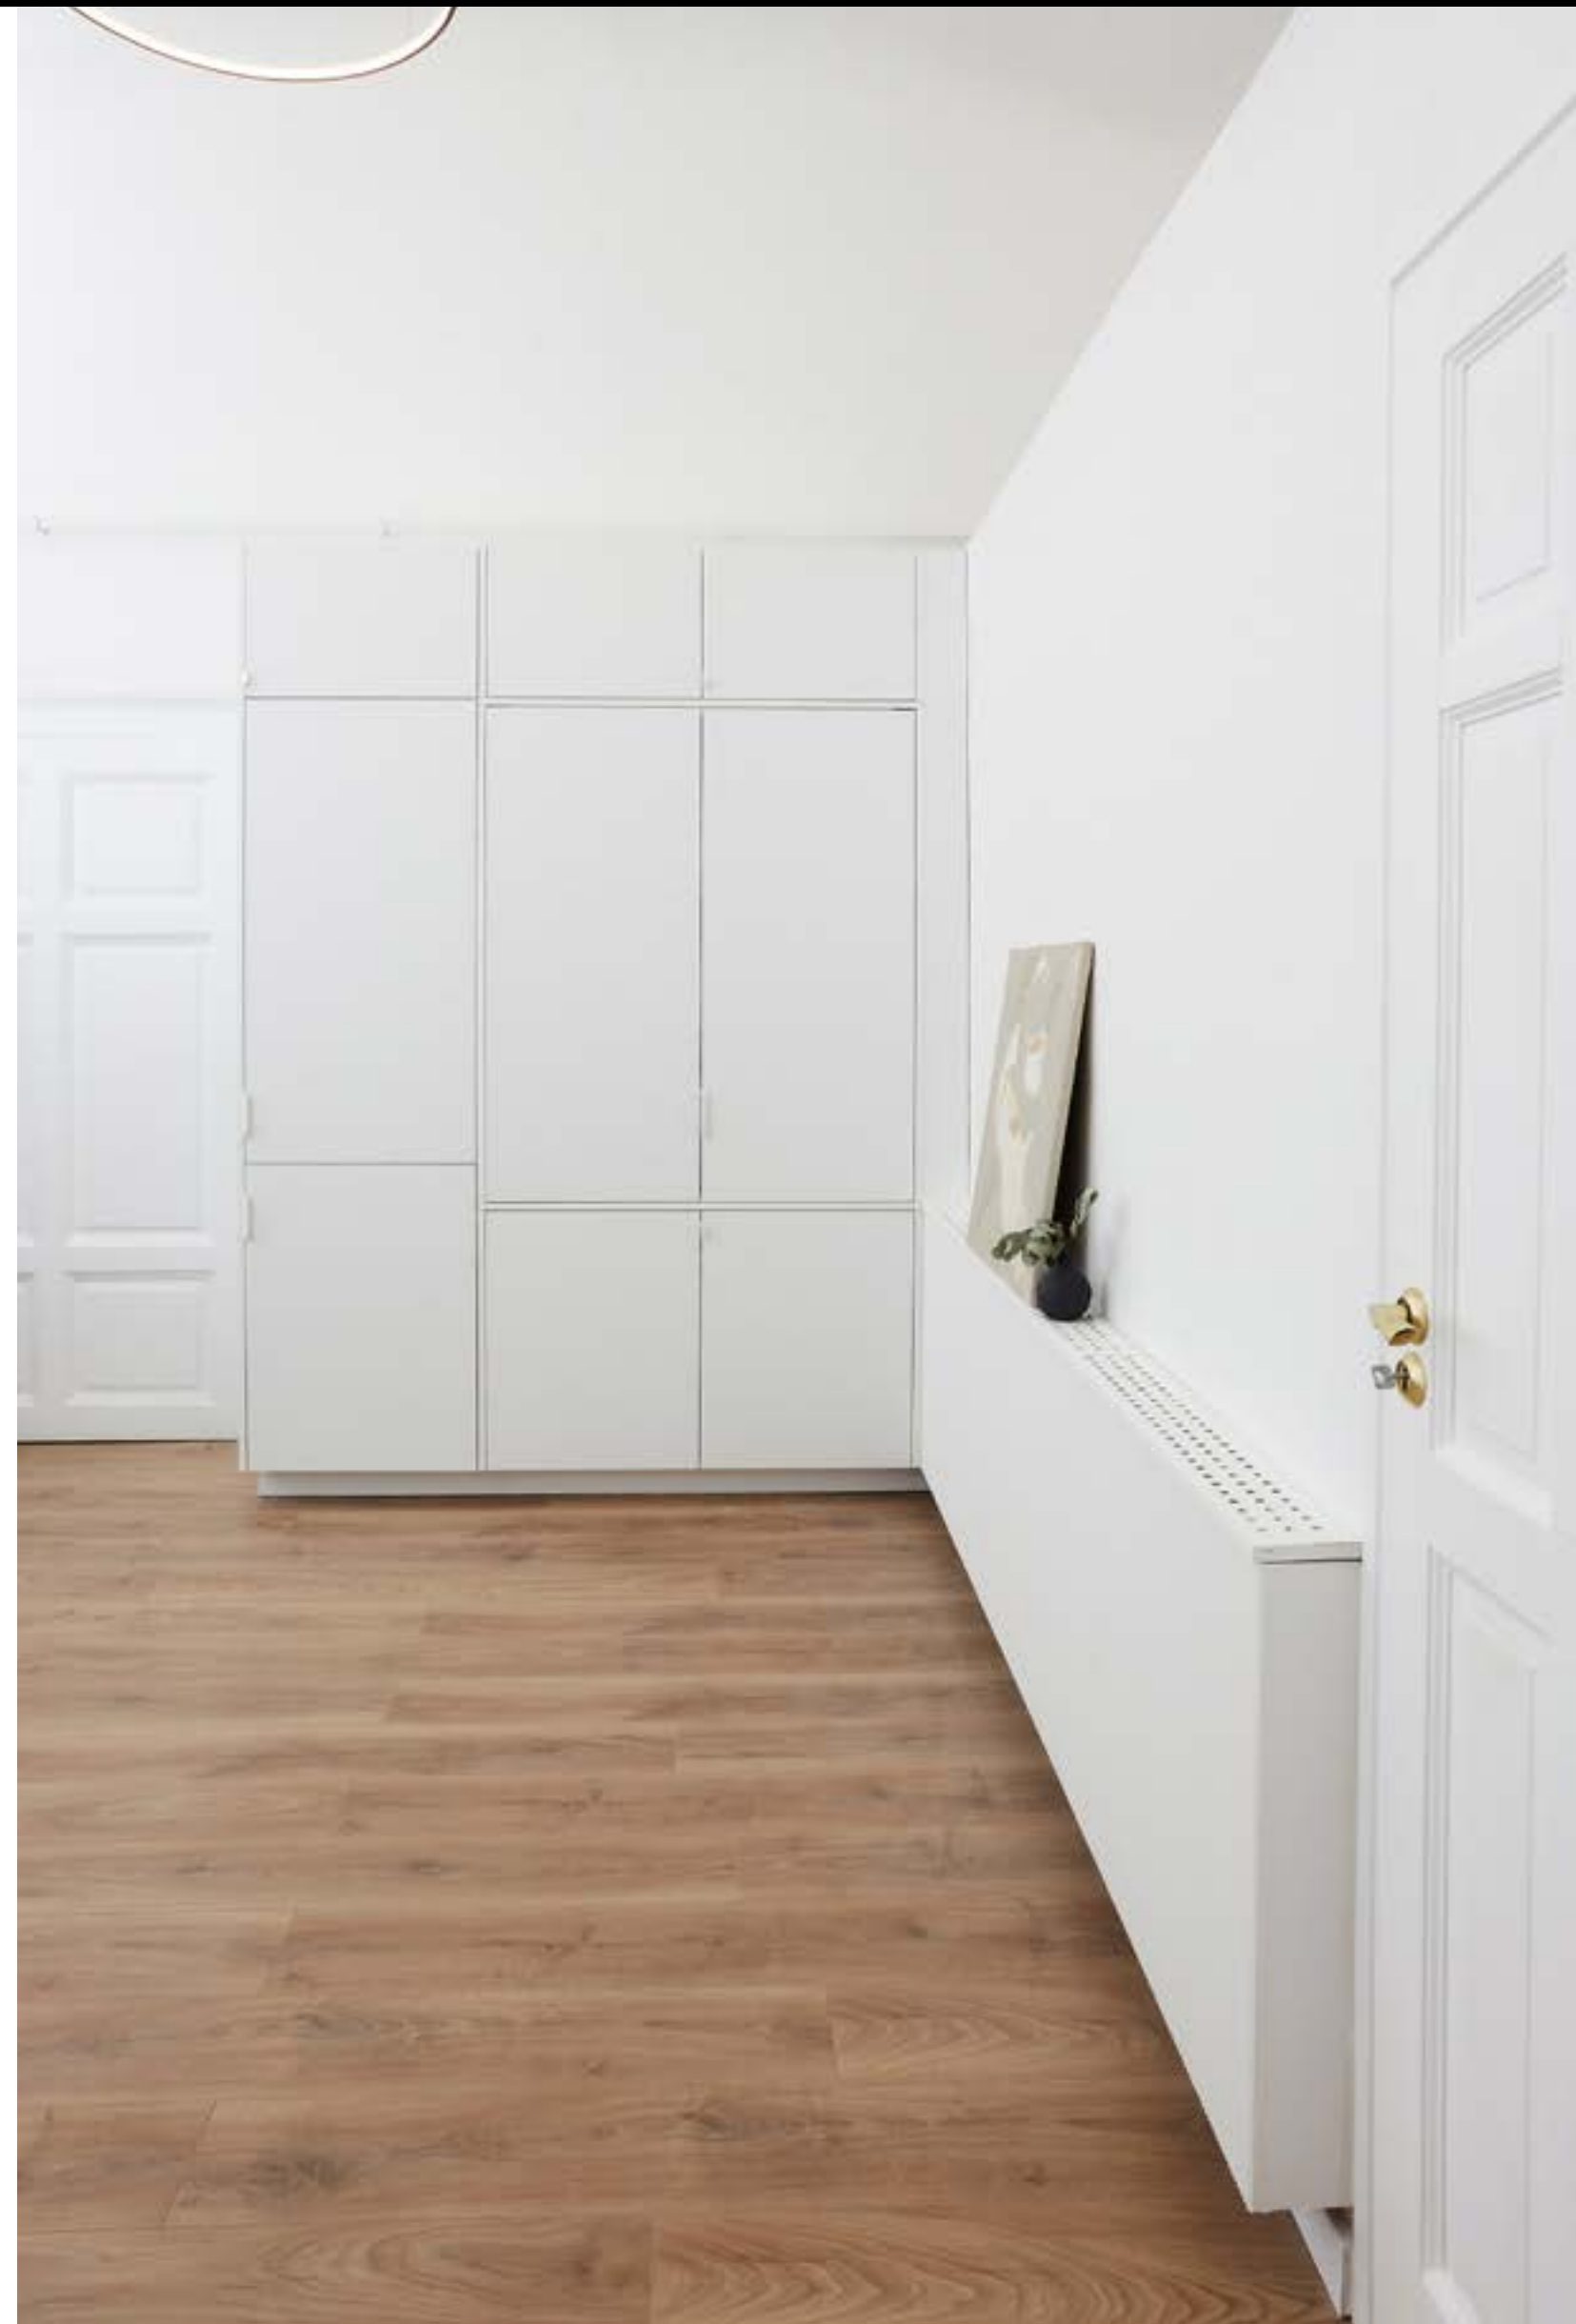

From the undivided space of an office with a floor area of approximately 300 m² on the second floor of the Hillside office building, we have created livable, easy-to-use workspaces for several companies of the same family. The high-prestige, restrained and elegant appearance is ensured by the large glass surfaces, natural coverings and harmoniously selected furniture. The floor plan is not public at the request of the customer.

interior design
teamwork with Fekete Áron

The task was to transform an apartment with a floor area of approximately 100 m² located on the first floor of a condominium under heritage protection in the frequented part of the 5th district. In the building that was home to 2 apartments per floor in the past, today there are an average of 8 apartments per floor, so the remaining snake-like floor plan of the design area justified the further division of the space into livable, compact properties. Thus, we designed and built 3 low-budget apartments equipped with durable materials that meet all needs for the owner living in America.

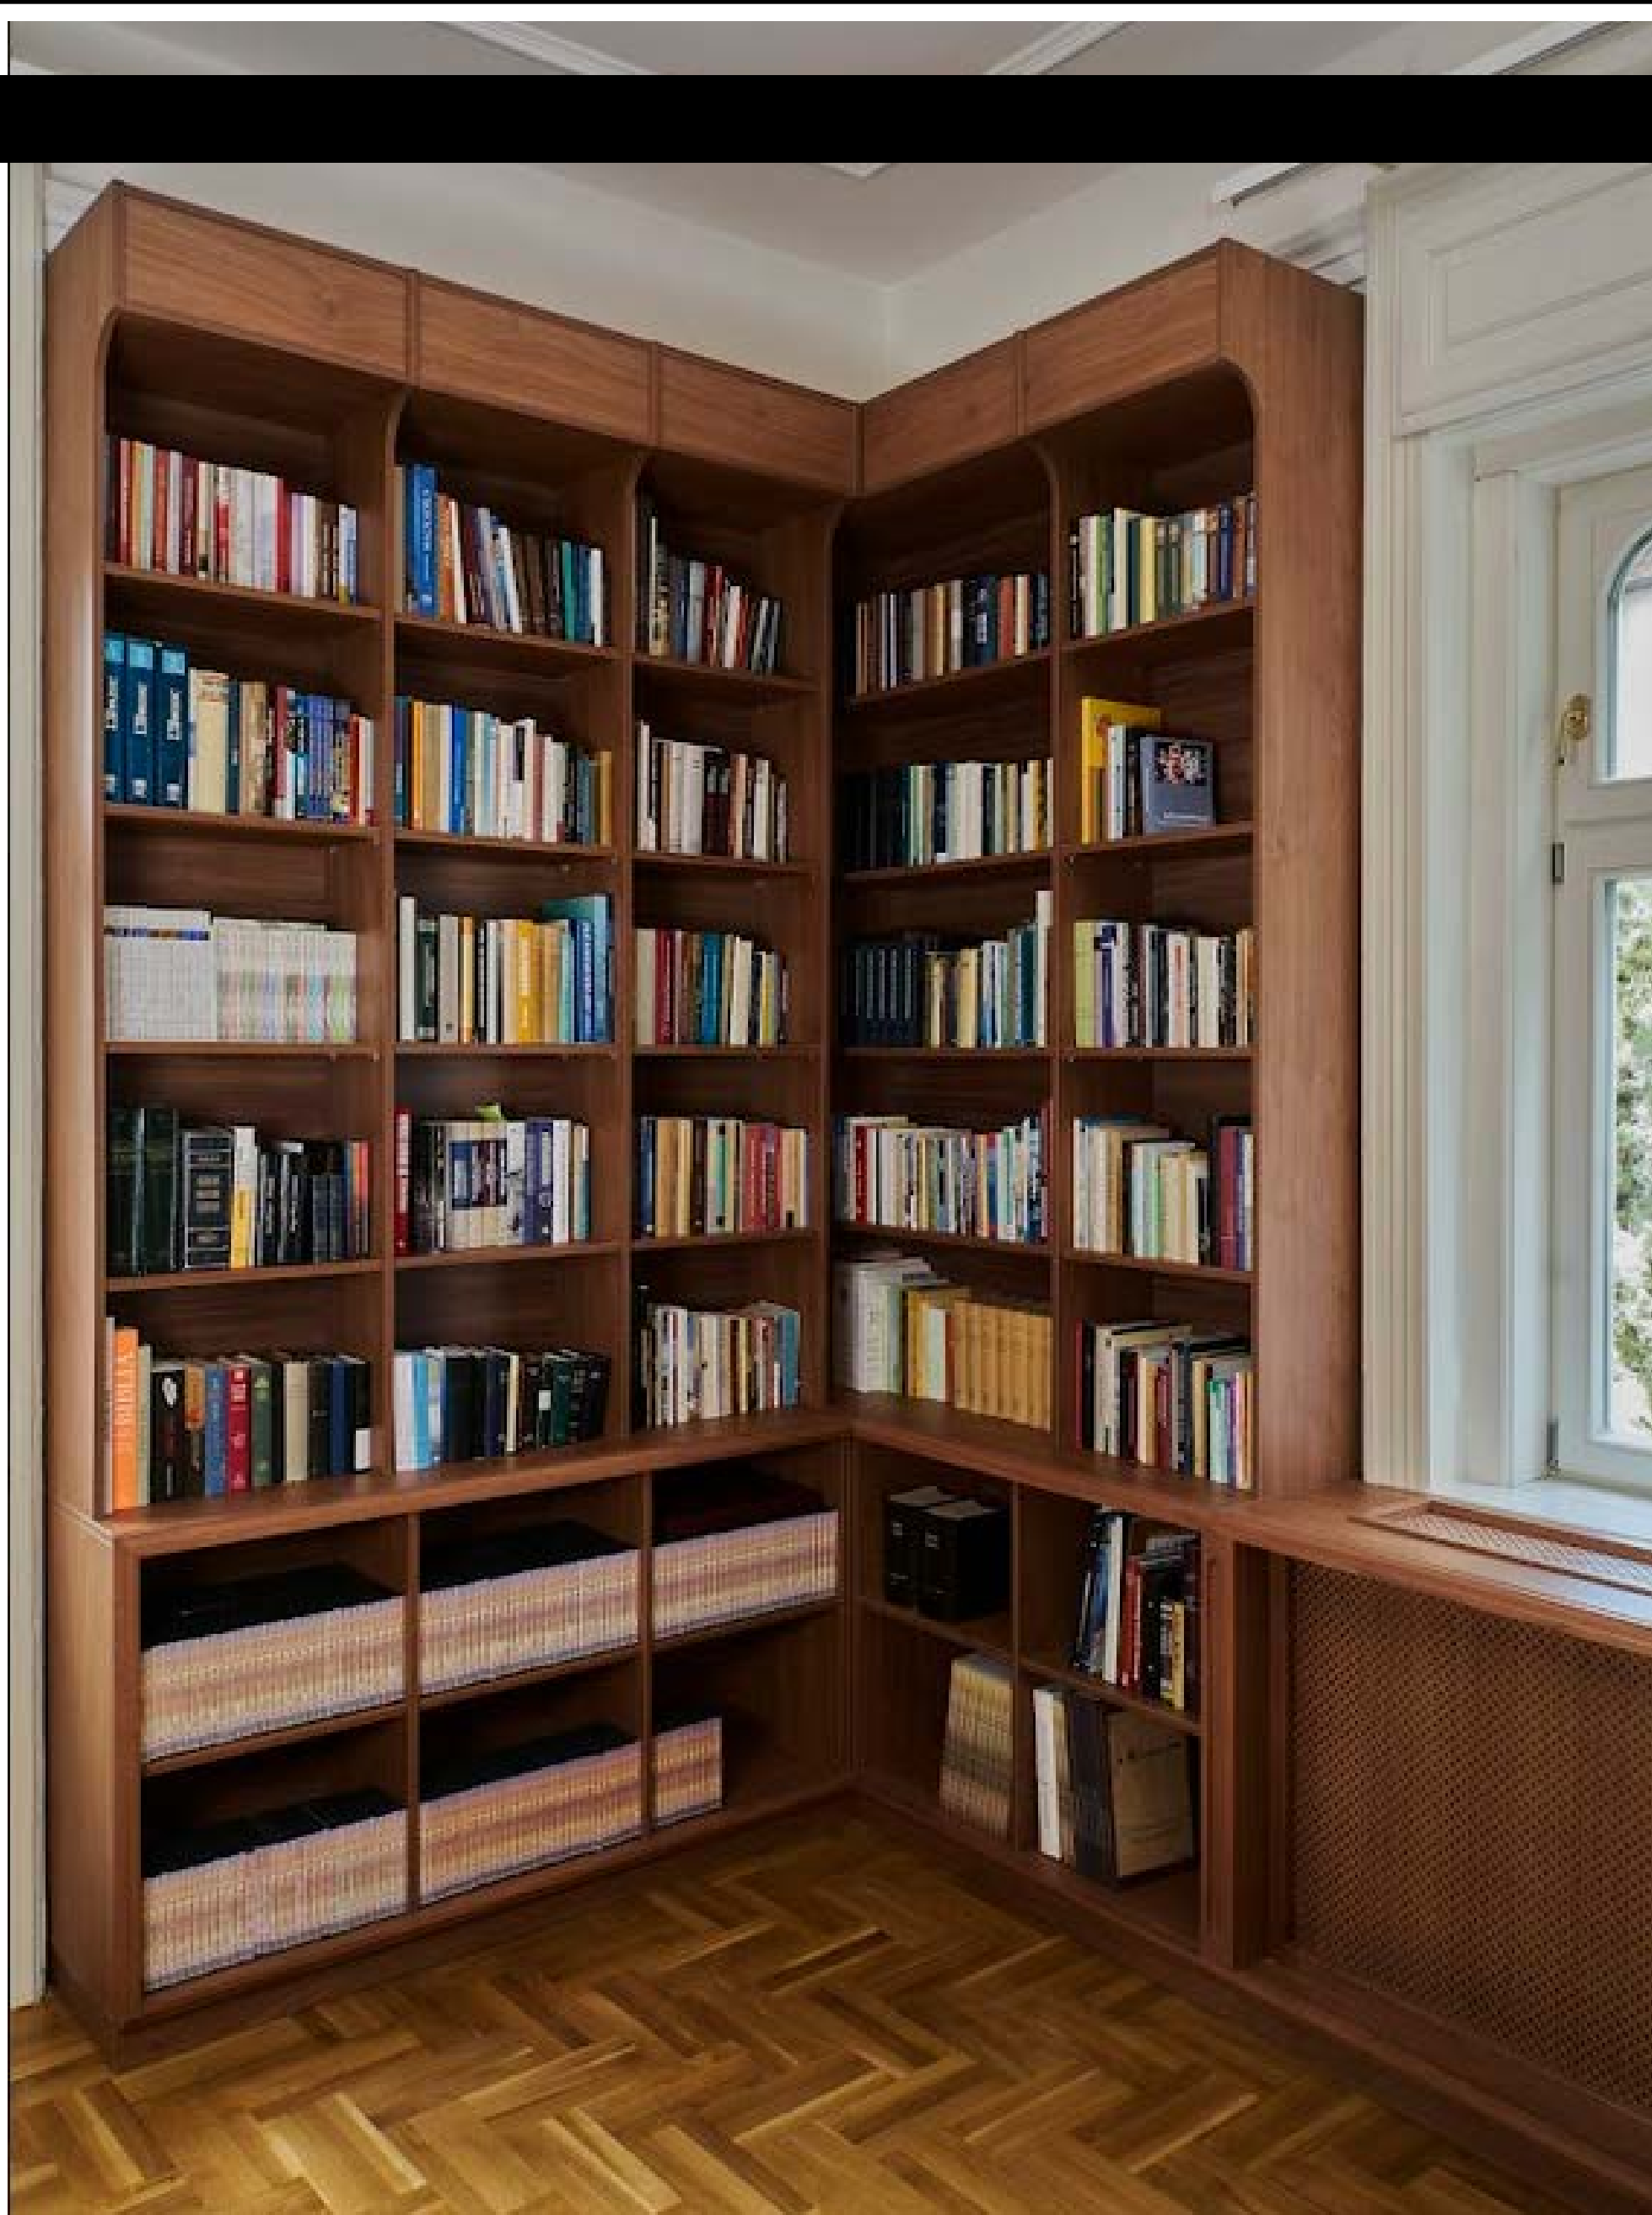

SZILÁGYI ERZSÉBET

office renovation

The Northern Bishop's Office of the Lutheran Church is located in a patina villa building in Zugliget. We make an office that has become occupied and crowded over the years worthy of its function with timeless, elegant furniture, materials and colors. During the planning process, we chose coverings, unique built-in furniture, mobile furniture and fabrics that offset the existing furniture and make the spaces impressive.

We completely replaced the furniture in the apartment of the family with small children. Maximizing the possibilities of the space, we created as many storage surfaces as possible, while taking into account individual needs, not only functional but also aesthetic furniture was created.

During the low-budget renovation of the 25 m2 property, we tried to create as much storage space as possible with minimal demolition and give the apartment a clean look. It was not possible to modify the layout of the floor plan, the materials installed are intended to compensate for the unfortunate water block design.
